

## **HPLC Sample Preparation Guidelines**

Discussions with an APAF staff member concerning the nature of samples to be sent for analysis is highly recommended.

### **Permits**

If you are sending any biological samples to APAF from countries outside of Australia go to the [Quarantine Guidelines](#) or [contact us](#) in regards to permits needed for Australian quarantine regulations and the recommended couriers to use.

### **Pathogenicity**

Biological samples coming into APAF should be accompanied by documentation of potential pathogenicity or pathogen free status otherwise APAF will presume all samples from human and animal origin are potential pathogens and will be treated accordingly.

### **How do I send samples from Overseas to APAF?**

For guidelines and documentation required visit our [Quarantine guidelines](#).
